BLOCKCHAIN SECURITY

A blockchain is a chain of blocks which contain information

Blockchain security is a comprehensive risk management system for a blockchain network. It uses cybersecurity frameworks, assurance services and best practices to reduce risks against attacks and fraud.

WHAT IS **CRYPTOCURRENCY**?

Cryptocurrency is a form of digital currency that relies on cryptographic techniques to secure transactions. Unlike traditional currencies, cryptocurrencies operate on decentralized networks based on blockchain technology. This blockchain is a distributed ledger that records all transactions across a network of computers, which mitigates the need for a central authority.

Cryptocurrencies enable peer-to-peer transactions. These tend to lower fees and speed up processing times by removing intermediaries. They use cryptographic methods to ensure the security and integrity of transactions.

DECENTRALISED SMART CONTRACT

Smart contracts are a part of Blockchain technology. Blockchain is a secure technology that no hacker can access

GTC is not managed by anyone, including its own software team. It is developed as a fully automatic system. Nobody has access to funds. Your funds are secured between you and the smart contract.

OUR VISION

To make everyone to learn the Life management and accomplish the Successful Life.

- Create the best and most transparent environment
- We are dedicated to offering best service
- Engage rural communities with corporates
- Support to maintain the ecological balance

OUR MISSION

Having the insight to reach everyone in and around the globe by the Digital Platform tasked with strategically guiding the growth of Individuals and transforming their life and financial freedom by the fantastic tool of education.

- We are dedicated and innovation.
